Portfolio Architecture & Resume Analysis

Prepared for Immanuvel Stanley A

Full-Stack & AI Engineer | Chennai, India

October 2026

What is inside

- Analysis of both resumes (Cars Only version and General IT version)
- Positioning strategy: how to present one clear identity
- Full website architecture: sitemap, tech stack, folder structure, data model
- Modern professional design system: colours, type, layout, motion
- Page-by-page content blueprint with ready-to-use copy
- SEO, performance, deployment and a 7-day build plan

Quick verdict

Your two resumes describe a strong, hybrid profile: a full-stack and AI builder with a live product (elementro.dev), measurable ML results, and a rare practical background in automotive diagnostics. The portfolio should lead with software, keep the automotive story as a distinctive second chapter, and fix a few inconsistencies between the two resumes first.

1. Resume Analysis

Side-by-side comparison

Area	Cars Only resume	General IT resume	What it means
Positioning	Software + automotive hybrid	Pure software / IT	Two audiences, one person. Portfolio needs a primary identity.
Summary	Mentions full stack, ML, scalable web, diagnostics	Full-stack, UI/UX, Agile, production-grade software	IT version is sharper; Cars version is more distinctive.
Skills	Java, AWS, PostgreSQL, Vector DB, pgvector, event-driven, auto skills	MySQL, MongoDB, Supabase, CI/CD, Docker (drops Java, AWS, Postgres, pgvector)	Skills lists disagree. Unify into one master list.
Intern role	UI/UX Intern, but bullets describe software development and testing	UI/UX Intern with Figma prototyping, 3 products, Agile	Title and bullets now match in IT version. Keep that version's story.
Education	2022 - 2026, CGPA 7.8, school marks listed	Nov 2022 - May 2026, CGPA 7.8	Use exact dates consistently. Skip school marks on the portfolio.
Projects	EcogenAI, Elementro (elementro.dev), MedVision	Same three, richer verbs	Same projects; need deeper case studies on the site.
Certifications	Adds Cars Only (automotive service)	Software-only certifications	Automotive cert fits the 'Beyond Code' section.

Strengths to build the portfolio around

- **Live product:** Elementro at elementro.dev is real proof of shipping. It should be the hero project.
- **Measurable results:** EcogenAI reports a 15% cut in delivery times and 20% less fuel use. Metrics make strong headlines.
- **Breadth:** React/Next.js/TypeScript front end, FastAPI back end, ML and computer vision, Docker and CI/CD.
- **Distinct story:** circuit analysis, scanning and fault-finding is real troubleshooting experience that most CS graduates lack.
- **Modern tooling:** Claude and Copilot in your workflow shows you are current.

Gaps and risks to fix before publishing

- **Inconsistent skills:** a recruiter who sees both resumes will notice Java/AWS/PostgreSQL appear in one and not the other. Pick one master list and use it everywhere.
- **Thin project outcomes:** Elementro and MedVision have no numbers (users, accuracy, load time). Add at least one metric or screenshot each.
- **No visible links in the resumes:** LinkedIn, GitHub and Portfolio appear as bare words. On the site, every project needs a GitHub link and a live demo or video.
- **Intern title mismatch:** in the Cars resume the title says UI/UX but the work reads as development. Describe it the way the IT resume does.
- **Mixed identity above the fold:** a hero that says both 'software' and 'automotive' confuses visitors. Lead with software only.
- **Graduation date:** May 2026 has passed, so update wording from 'undergraduate' to 'recent graduate' (or 'B.E. Computer Science, 2026').

2. Positioning Strategy

Use one portfolio with a clear primary identity and a clearly separated secondary page.

Element	Recommendation
Headline	Full-Stack & AI Engineer who ships real products
Sub-headline	I build fast React/Next.js interfaces, FastAPI back ends and ML-powered features. Creator of Elementro.
Primary CTA	View Projects
Secondary CTA	Download Resume (General IT version)
Differentiator	'Beyond Code' section: automotive diagnostics background that shows systematic debugging.
Automotive page	Separate route /service with the Cars Only resume download. Not on the home hero.
Tone	Confident, concrete, outcome-first. Short sentences. No buzzword stacking.

3. Recommended Tech Stack

Layer	Choice	Why
Framework	Next.js 15 (App Router) + TypeScript	Matches your skills, great SEO, static generation, easy Vercel deploy.
Styling	Tailwind CSS + shadcn/ui	Fast, consistent, accessible components with a professional look.
Animation	Framer Motion	Subtle scroll reveals and hover effects without heavy code.
Content	MDX files for projects and blog	Write case studies in Markdown, no database needed.
Icons / fonts	lucide-react, next/font (Inter + JetBrains Mono)	Zero layout shift, self-hosted fonts.
Contact form	Next.js Route Handler + Resend (email)	Messages go to your inbox; no server to manage.
Optional data	Supabase (you already use it)	Only if you add a guestbook or view counter.
Analytics	Vercel Analytics + Speed Insights	Privacy-friendly, one line to enable.
Hosting	Vercel + custom domain	Free tier, automatic previews, HTTPS, CI/CD from GitHub.
Quality	ESLint, Prettier, Lighthouse CI via GitHub Actions	Shows engineering discipline to reviewers.

Keep the site static-first. A portfolio does not need a heavy back end; the speed is part of the impression.

4. Sitemap and Page Architecture

Route	Purpose	Key sections
/	Home, the 30-second pitch	Hero, featured projects (3), skills strip, experience snapshot, certifications, contact CTA
/projects	All projects with filters	Filter chips: AI/ML, Web, Computer Vision; card grid
/projects/[slug]	Case study per project	Problem, role, stack, architecture diagram, results, screenshots, links
/about	Story and background	Short bio, education timeline, certifications, interests
/experience	Internship and learning	Retech Solutions role, Figma work, what you learned

Route	Purpose	Key sections
/service	Beyond Code: automotive	Diagnostics skills, circuit analysis, Cars Only certification, resume download
/resume	Resume viewer + download	Embedded PDF, download buttons for both versions
/contact	Reach you	Form, email, LinkedIn, GitHub, response-time note

5. Project Folder Structure

```
portfolio/
|-- app/
|   |-- layout.tsx              # fonts, theme provider, navbar, footer
|   |-- page.tsx                # Home
|   |-- projects/
|   |   |-- page.tsx            # Projects grid + filters
|   |   `-- [slug]/page.tsx     # Case study (reads MDX)
|   |-- about/page.tsx
|   |-- experience/page.tsx
|   |-- service/page.tsx        # Automotive 'Beyond Code'
|   |-- resume/page.tsx
|   |-- contact/page.tsx
|   |-- api/contact/route.ts    # Resend email handler
|   |-- sitemap.ts  robots.ts  opengraph-image.tsx
|-- components/
|   |-- ui/                     # shadcn: button, card, badge, tabs, dialog
|   |-- sections/               # Hero, FeaturedProjects, Skills, Timeline, ContactCTA
|   |-- ProjectCard.tsx  Navbar.tsx  Footer.tsx  ThemeToggle.tsx
|   `-- motion/Reveal.tsx       # Framer Motion wrapper
|-- content/
|   |-- projects/ecogenai.mdx  elementro.mdx  medvision.mdx
|   `-- data/profile.ts  skills.ts  experience.ts  certifications.ts
|-- lib/  mdx.ts  utils.ts  seo.ts
|-- public/
|   |-- resume/Immanuvel_Stanley_Resume_General_IT.pdf
|   |-- resume/Immanuvel_Stanley_Resume_Automotive.pdf
|   `-- images/                 # screenshots, avatar, og image
|-- styles/globals.css          # design tokens
|-- tailwind.config.ts  next.config.mjs  .github/workflows/ci.yml
```

All text lives in `content/data` and MDX. To update the site later you edit data, not components.

6. Content Data Model

```
type Project = {
  slug: string; title: string; tagline: string;
  category: ("AI/ML" | "Web" | "Computer Vision")[];
  stack: string[]; featured: boolean;
  metrics?: { label: string; value: string }[];   // e.g. "Delivery time", "-15%"
  links: { live?: string; github?: string; video?: string };
  cover: string; year: number;
}
type Skill = { name: string; group: "Frontend"|"Backend"|"Data/ML"|"Cloud"|"Tools"|"Service" }
type Experience = { role: string; org: string; period: string; points: string[] }
```

Master skills list (merged from both resumes, to use everywhere)

Group	Skills
Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, Figma
Backend	FastAPI, REST APIs, Python, Java (if you can still defend it in interviews)
Data / ML	Pandas, Machine Learning, CNN, Computer Vision, Vector DB, pgvector

Group	Skills
Databases	PostgreSQL, MySQL, MongoDB, Supabase
Cloud / DevOps	AWS, Docker, CI/CD pipelines, Git/GitHub, Event-driven architecture
Beyond Code	Circuit diagram analysis, vehicle scanning and diagnostics, electrical fault-finding, wiring

Only list skills you could discuss for five minutes in an interview.

7. Modern Professional Design System

Token	Dark theme (default)	Light theme
Background	#0B0F19	#FFFFFF
Surface / cards	#111827 with 1px border #1F2937	#F8FAFC with border #E2E8F0
Text primary	#F1F5F9	#0F172A
Text muted	#94A3B8	#475569
Primary accent	#6366F1 (indigo)	#4F46E5
Secondary accent	#22D3EE (cyan) for highlights and links	#0891B2
Gradient	indigo to cyan, used only on hero name and key buttons	same

Typography and layout

- **Fonts:** Inter for body and UI, Space Grotesk or Inter Tight for headings, JetBrains Mono for tags and code.
- **Scale:** hero 56-72px, section titles 36px, body 16-18px, line-height 1.6.
- **Grid:** 12-column, max width 1152px, 24px gutters, generous vertical spacing (96-128px between sections).
- **Cards:** 16px radius, soft border, subtle glow on hover, slight lift (translateY -4px).
- **Navbar:** sticky, blurred glass background, active-section highlight, theme toggle, 'Resume' button on the right.
- **Motion:** fade-up on scroll (once), 200-300ms transitions, respect prefers-reduced-motion.
- **Accessibility:** contrast at least 4.5:1, visible focus rings, alt text on all screenshots, keyboard-navigable menu.
- **Responsive:** mobile-first; single-column under 768px; hamburger menu; tap targets 44px.

8. Home Page Blueprint

#	Section	Content	Design notes
1	Hero	Name, headline, sub-headline, 2 CTAs, links to GitHub/LinkedIn, small 'Open to roles' badge	Large type, soft gradient glow, optional animated code snippet or grid background
2	Featured projects	Elementro, EcogenAI, MedVision with cover, tagline, stack tags, metric badge	3-card grid, hover reveals 'View case study'
3	Skills	Grouped chips from the master list	Tabs or grouped rows, no percentage bars
4	Experience	Retech Solutions: UI/UX Intern, Jun-Jul 2024, three outcome bullets	Vertical timeline
5	Beyond Code	Two-sentence automotive story + link to /service	Split card with image of circuit or scan tool
6	Certifications	NPTEL x2, AWS ML Foundations, Microsoft Applied AI, Coursera	Compact badge row with issuer

#	Section	Content	Design notes
7	Contact CTA	'Let's build something' + email button + socials	Full-width gradient band

Ready-to-use hero copy

Hi, I'm Immanuvel Stanley. I build fast, polished web products and AI-powered features. Creator of **Elementro**, a real-time React UI component editor used by beginner developers. I turn complex problems, from route optimisation to medical imaging, into clean, working software.

Case study template for each project

- **Overview:** one-line pitch plus your role and timeframe.
- **Problem:** who struggled and why.
- **Solution:** what you built, with an architecture diagram.
- **Stack:** technologies and why you chose them.
- **Results:** metrics (EcogenAI: -15% delivery time, -20% fuel use) or accuracy, speed, users.
- **Screens:** 3-5 screenshots or a short demo video.
- **Learnings and next steps:** shows maturity.
- **Links:** Live demo, GitHub, video.

Project improvements that will strengthen the portfolio

Project	Hero line	What to add
Elementro	Real-time React UI component editor at elementro.dev	Live embed or GIF, load-time and bundle numbers, how state is managed, number of users or sessions.
EcogenAI	AI route optimisation: -15% delivery time, -20% fuel	Dataset and model used, evaluation method, simple before/after chart, architecture diagram.
MedVision	CNN medical image analysis	Accuracy / IoU numbers, sample outputs, dataset source, deployment or notebook link.

9. The /service Page (Automotive)

- **Title:** Beyond Code: Diagnostics and Electrical Systems.
- **Story:** how reading circuit diagrams and fault-finding builds the same mindset as debugging software.
- **Skills:** circuit diagram analysis, scanning and diagnostics, troubleshooting, electrical and electronic repair, wiring, customer service.
- **Proof:** Cars Only certification and any photos of work you can share.
- **CTA:** download the Cars Only resume; contact form with a 'Service enquiry' option.
- **Bridge idea:** mention it on the home page as a one-line differentiator, such as 'I debug systems, whether it is a wiring harness or a microservice.'

10. SEO, Performance and Quality Targets

Area	Action
Metadata	Unique title and description per page, Open Graph and Twitter cards, auto-generated OG image.
Structured data	JSON-LD Person schema on home page; links to GitHub and LinkedIn.
Crawling	sitemap.ts, robots.ts, canonical URLs.
Images	next/image with WebP/AVIF, explicit sizes, lazy loading below the fold.

Area	Action
Core Web Vitals	LCP under 2.5s, CLS under 0.1, INP under 200ms.
Lighthouse	Target 95+ in Performance, Accessibility, Best Practices and SEO.
Security	HTTPS, security headers, rate-limit the contact route, honeypot field for spam.
Analytics	Vercel Analytics; track Resume downloads and project link clicks.

11. Deployment and Workflow

- Create a GitHub repo and push the project; protect the main branch.
- Import it into Vercel; every pull request gets a preview URL.
- Add environment variables (RESEND_API_KEY, CONTACT_TO_EMAIL) in Vercel settings.
- Connect a custom domain (for example immanuvelstanley.dev or a .in domain) and enable HTTPS.
- Add a GitHub Action that runs lint, type-check and Lighthouse CI on each pull request.
- Add the portfolio link to both resumes, LinkedIn and your GitHub profile README.

12. 7-Day Build Plan

Day	Goal	Deliverable
1	Finalise positioning, master skills list, gather screenshots and metrics	content/data files drafted
2	Scaffold Next.js + Tailwind + shadcn; set design tokens, fonts, navbar, footer	App shell with theme toggle
3	Build Hero, Featured Projects, Skills sections	Home page v1
4	Project grid and MDX case studies for all three projects	/projects and /projects/[slug]
5	About, Experience, Service and Resume pages	Remaining routes complete
6	Contact form, SEO, OG images, accessibility pass	Production-ready features
7	Lighthouse tuning, deploy to Vercel, connect domain, update resumes and LinkedIn	Live portfolio

Next step: tell me which direction you prefer (dark or light default, and which accent colour) and I can build the full working portfolio as code or a live page using this architecture.
